DIRECTIONS FOR USE

Apply EXPRESS® at a rate of 1/4 to 1/2 oz per acre for suppression of up to 4" emerged velvetleaf in sunflower hybrids with the ExpressSun® trait.

Apply EXPRESS® at a rate of 1/2 oz per acre for suppression of up to 4" emerged cocklebur in sunflower hybrids with the ExpressSun® trait. A sequential application at a rate of 1/2 oz per acre should be made about 14 days after the first application to achieve a higher level of suppression.

Apply EXPRESS® to ExpressSun® sunflowers any time from the 2-leaf stage of growth up to but not including the bud formation stage.

Do not apply more than 1 oz of EXPRESS® per acre per use season.

Adjuvants

For best results, add a crop oil concentrate or modified seed oil (methylated, ethylated or saponified) at 1% v/v (1 gallon per 100 gallons of spray).

Tank Mixes

Express may be tankmixed with other suitable registered herbicides such as ASSURE® II. Read and follow all manufacturer's label recommendations for the companion herbicide. If those recommendations conflict with the EXPRESS® section 3 label use directions, do not tank mix the herbicide with EXPRESS®.
