

Roundup Ready®

SEEDS 2000 Soybean Brands

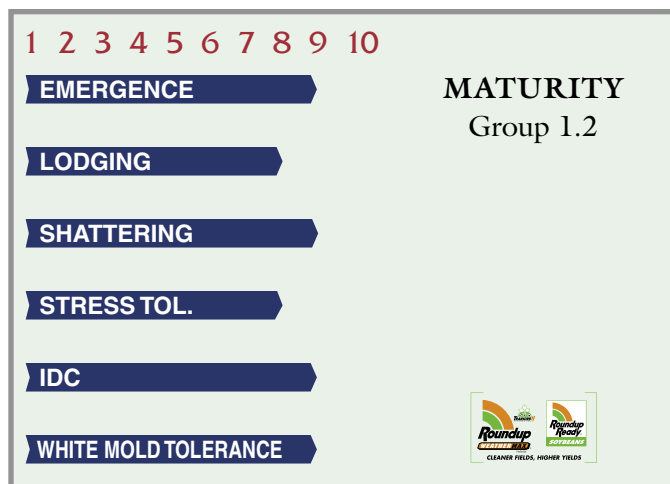

0081RR Brand

- Defensive bean with top end yield potential
- 1.8 IDC score plus K Gene phytophthora tolerance
- Good stress tolerance
- Medium plant height
- Adapted to all row spacings

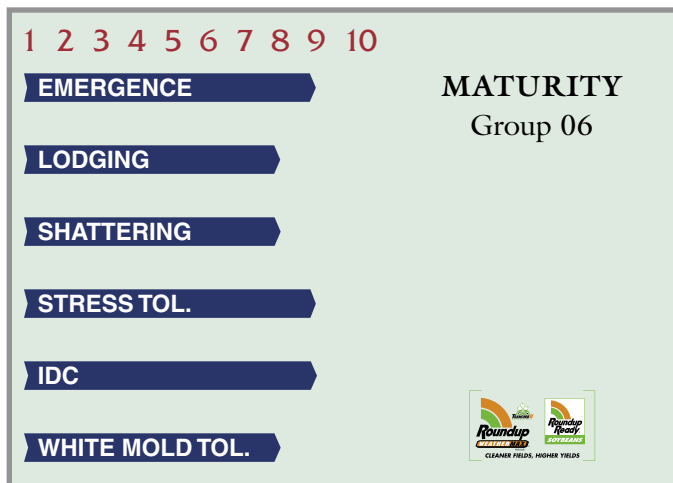

2120RR Brand

- Medium plant height
- 1.8 IDC score
- K Gene w/1.8 field tolerance to Phytophthora
- Very good white mold tolerance

2060RR Brand

- Defensive bean with excellent yields
- Tall plant height
- 1.8 IDC score
- Excellent lodging score
- Suited to all row spacings

NEW SEED BENEFITS

When you plant SEEDS 2000 Roundup Ready® soybean brands, you get the latest available genetics and professionally grown seed, meeting rigorous quality standards. Each unit is carefully handled to ensure the highest rate of germination, maintain genetic purity, reduce damaged seed and remove weed seeds. The result is higher yields with SEEDS 2000 soybean brands.

Newly purchased seed yields on average 1.8 bu/acre more than bin run. And, when you consider average cleanout of 10-15% for bin run and a 15% higher seeding rate to compensate for quality, newly purchased seed provides true value.

With new seed, you receive company support before and after the sale. And, you become eligible for the Roundup Rewards® program when you use Roundup® brand herbicides, a program, that has paid out in excess of \$500 M to growers since 1997.

SEEDS 2000 and Monsanto are committed to the long-term success of your farming operation. Trait royalties provide resources for research and development of new traits and higher yielding germplasm. The next generation of new traits is about to be launched to create even more value in new seed products. *Plant new seed. It pays!*
